

NetSentinel

Connection report

Period: 2026-09-01 to 2026-09-30 (UTC)
Generated: 2026-10-02T00:00:00.000Z
Scope: PUBLIC BROWSER / SIMULATION - NON-PRIVATE TEST DATA

A snapshot for troubleshooting and comparison. No application traffic, Defender status, malware scans or firewall state is available to this public website. Local sections require the separately installed companion.

Internet speed measurements

Source: Cloudflare edge, HTTPS transfers started by the browser. Mbps uses decimal megabits per second. Latency is median HTTP timing; jitter is the mean absolute difference between adjacent successful latency samples. These are not ICMP ping, packet loss, maximum line capacity or ISP billable usage.

Time (UTC)	State	Down Mbps	Up Mbps	Latency ms	Jitter ms
2026-09-01 12:00:00	complete	12.00	4.00	24.00	3.00
2026-09-02 12:00:00	complete	13.00	4.10	24.00	3.00
2026-09-03 12:00:00	complete	14.00	4.20	24.00	3.00
2026-09-04 12:00:00	complete	15.00	4.30	24.00	3.00
2026-09-05 12:00:00	complete	16.00	4.40	24.00	3.00
2026-09-06 12:00:00	complete	17.00	4.50	24.00	3.00
2026-09-07 12:00:00	complete	18.00	4.60	24.00	3.00
2026-09-08 12:00:00	complete	19.00	4.70	24.00	3.00
2026-09-09 12:00:00	complete	20.00	4.80	24.00	3.00
2026-09-10 12:00:00	complete	21.00	4.90	24.00	3.00

2026-09-30 12:00:00	11.000	4.500	Completed payloads

Download comparison (Mbps)

Received bytes use browser-reported decoded response bodies when available. Confirmed upload bytes count payloads with a completed server response. Cancelled, failed or retried requests can transfer additional uncounted bytes. Protocol overhead and retransmissions are unavailable. Short single-connection transfers can understate fast links; compare tests under similar conditions.

Lightweight connection checks

No connection checks available in the selected period.

Eight small requests to this website. Range = slowest minus fastest successful response. Failed requests remain missing. LOCAL checks describe the local app only; LIVE checks describe the path to this site. Neither proves the cause of a connection problem.

Public network details

Field	Observed value
Lookup source	ipwho.is
Observed (UTC)	2026-09-25T12:00:00.000Z
Address family	IPv4
Public IP	Hidden by default
Network organization	NON-PRIVATE EXAMPLE NETWORK WITH A LONG ORGANIZATION NAME FOR TABLE WRAPPING NON-PRIVATE EXAMPLE NETWORK WITH A LONG ORGANIZATION NAME FOR TABLE WRAPPING
ASN	AS64500
Approximate location	Hidden by default

The provider sees this browser's apparent public address. VPNs, proxies and shared networks can change the apparent organization and location. Geolocation is approximate, not a physical address. A single lookup may expose only one address family.

Privacy and interpretation

IP addresses: hidden. Location: hidden. No executable paths, browsing URLs or packet payloads are collected by the public tools. Reports stay on your device unless you share them. Built-in PDF fonts transliterate Latin accents and replace unsupported characters with ?.

No security verdict or automatic control action is generated from these measurements. Keep downloaded files private, and delete them when no longer needed. NetSentinel does not guarantee internet availability.
