

NetSentinel

Local observation report

SIMULATION | Installed Windows companion | Schema companion-v1

LABELLED TEST DATA. This example is not a measurement of a user's computer.

Report period: 2026-09-25 12:00:00 UTC through 2026-10-02 12:00:00 UTC

Generated: 2026-10-02 12:00:00 UTC

Privacy: executable paths and remote addresses HIDDEN. Executable display names remain visible.

Application usage

Approximate packet-to-socket attribution; observed IP bytes, not payload bytes or ISP billable usage. Daily buckets are UTC. A record with no traffic is different from missing observation.

Top observed applications - combined IP bytes (MiB)

Available Windows security and scan status

Windows status has not been queried in this session. No Defender or firewall claim is available.

Scan observations have not been requested in this session.

Observed flow segments and traffic alerts

At most 500 retained flow segments, not confirmed complete connections. Segment bytes are associated observations, not lifetime connection totals. Addresses are hidden unless explicitly included.

Observed UTC	Application / protocol	Remote endpoint	Up / down bytes

Observed UTC	Evidence-based observation
None retained	No alert is not a safety verdict.

Quota warnings and control actions

Observed UTC	Category	Action / available outcome
Unavailable	No retained actions	No action history in this period.

Rule application is not verified traffic blocking. Automatic blocking requires explicit enforcement and quota opt-in. Statistical anomalies never trigger blocks.

Method and limits

Approximate packet/socket matching; observed IP bytes, not ISP billing. Retention: usage 90 days; observed flows 7 days/10,000; events 90 days/2,000. Returned flows/events capped at 500. Missing capture is not zero usage. Capture state at generation: SIMULATION fixture. Last observed packet: 2026-10-02 11:59:00 UTC. This current state does not reconstruct past capture gaps. Kernel loss remains unknown. Measurement versions: packet-socket-approx-v1; companion-v1; descriptive traffic rules v1. Existing host-v1 Isolation Forest research remains separate: its unusualness is not malware probability. Standard PDF font text is normalized to ASCII; unsupported characters may appear as ?. No packet payloads, browsing URLs or credentials are exported.
